

THIS PARACHUTE IS EQUIPPED WITH AN ARGUS SAFETY DEVICE, SAFE FOR AIRLINE TRAVEL

1. Processing Unit
2. Cutter
3. Control Unit
4. Wiring

To the Transportation Security Authority:

It is safe to transport a parachute system equipped with an Argus safety device on a commercial airplane. The Argus is a life saving, electronic activation device designed to automatically open a reserve parachute. The X-Ray picture shows an Argus installed in a complete parachute system. The Argus may appear slightly different due to variations in parachute type or packing techniques. This safety device is composed of a processing unit, 2 batteries, a control unit and a cutter. This cutter is classified excluded from UN class 1 by the UK Health & Safety Executive under File Ref.: XI/5111/1169. And thus safe for air travel.

For more information, see www.argus-aad.com or call +32-2/731 97 98 or 1-866-44-ARGUS
