Argus Functional Check-up Service Bulletin

Dear Skydiver,

We noticed that a significant number of Argus units come in well overdue for the functional check-up of the four year cycle.

Every 4 years the Argus SIS must have a check-up at a local Authorized Service Center.

All systems that had their last functional check-up carried out over 4 years and 3 months ago are not airworthy and should not be installed in any parachute system.

You can download our service bulletin [HERE](#) .

Kind regards,

Karel Goorts
